

Sahar Mehrpour

✉ sahar.mehrpour@gmail.com  sahar-mehrpour.github.io  sahar-mehrpour  SaharMehrpour

Senior Software Engineer with 7+ years of experience building scalable full-stack applications, developer tooling, and distributed systems. Strong background in React/TypeScript, backend architecture, and developer productivity platforms, with experience at Google and PhD research in software engineering and HCI.

Experience

Software Engineer *OurCode Inc.*

Fairfax, VA June 2024 - Jan 2025

- Led architecture and development of a developer-facing SaaS platform using static analysis to enforce design and compliance rules.
- Built APIs, IDE integrations, and scalable analysis pipelines for large codebases.
- Developed core platform architecture across IDE plugins and web applications.
- Mentored several engineers and established engineering best practices for testing, reviews, and reliability.
- Tech: JavaScript, TypeScript, React, Node.js, Java, WebSockets, IntelliJ SDK, VSCode API

Software Engineer Intern *Google*

Remote, US June 2023 - Sep 2023

- Designed and built log-analysis interfaces for Google Search Generative AI workflows.
- Developed reusable React/TypeScript frontend infrastructure for complex internal data workflows.
- Partnered with product, design, and ML teams on system architecture and user workflows.
- Tech: TypeScript, React, Golang

Software Engineer Intern *Google*

Remote, US Sep 2022 - Dec 2022

- Developed an accessibility-focused Chrome extension integrating TensorFlow Lite and WebAssembly for real-time phrase detection.
- Collaborated with product and ML teams on system design and data presentation.
- Tech: TypeScript, Python, C++, WebAssembly, TensorFlow Lite

Software Engineer (Developer Tools & Research) *George Mason Univ.*

Fairfax, VA May 2017 - May 2024

- Built developer tools enabling automated analysis and rule-based workflows across large codebases.
- Designed backend algorithms, data pipelines, and distributed platforms spanning IDE plugins and web applications.
- Developed internal frameworks for scalable developer tooling and code analysis.
- Performed code reviews, mentored engineers, and contributed to technical design decisions.
- Tech: TypeScript, JavaScript, Java, React, Node.js, VSCode API, IntelliJ SDK

Independent Work

E-commerce Platform (Independent Project) [GitHub Repo](#)

March 2026 – Present

- Building a full-stack e-commerce platform using Spring Boot, React, Kafka, MongoDB, PostgreSQL, Redis, and Docker.
- Designing scalable backend APIs and event-driven workflows for distributed system architecture.
- Implementing caching, asynchronous processing, and containerized services in a production-style environment.

Skills

- **Languages:** Java, TypeScript, JavaScript, Python, SQL
- **Frontend:** React, TypeScript, frontend architecture, state management
- **Backend & Systems:** Node.js, Spring Boot, REST APIs, WebSockets, distributed systems, microservices, event-driven architecture, static analysis, AST processing
- **Cloud & Infrastructure:** AWS (EC2, Lambda, S3), Docker, Kafka, Kubernetes (via Minikube/kubect1)
- **Databases:** SQL (SQLite, PostgreSQL), NoSQL (MongoDB, Firebase Firestore), Redis
- **Developer Tools:** VS Code API, IntelliJ SDK, Git, Maven
- **Testing:** Jest, Mocha, Sinon, unit testing, performance profiling

Education

PhD in Computer Science – <i>George Mason University</i>	<i>2024</i>
MSc in Computer Science – <i>University of Manitoba</i>	<i>2016</i>
BSc in Computer Science – <i>Sharif University of Technology</i>
